Sequence 746 AA;	The DNA was isolated by screening a human B cell cDNA library with mid Drosophila DNA probes based on the conserved SET domains in E(z) and Su(var)3-9. The DNA, and its products, are useful in therapy (esp. ger therapy) and diagnosis of human diseases that involve deregulated chromatin-regulator genes having a SET domain, esp. cancer. (Updated c5-MAR-2003 to correct PR field.)	Claim 12; Fig 7; 38pp; German.	New DNA encoding chromatin regulator protein with SET domain - and related vectors, transformed cells, proteins and antibodies, for diagnosis and treatment of cancer.	WPT; 1996-518672/51. N-PSDB; AAT43624.	Jenuwein T, Laible G;	(BOEH) BOEHRINGER INGELHEIM INT GMBH.	10-MAY-1995; 95DE-01016776.	02-MAY-1996; 96WO-BP001818.	14-NOV-1996.	WO9635784-A2.	Homo sapiens.	Chromating; regulator; EZH1; EZH2; SUV39H; SET domain; gene therapy; cancer.	Chromatin regulator protein EZH2.	25-MAR-2003 (revised) . 05-MAY-1997 (first entry)	AAW05260;	RESULT 1 AAW05260 D AAW05260 standard; protein; 746 AA.

                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for detecting a lung cancer-associated contrained in a cell from a patient, comprising contacting a biological contracting tin a cell from a patient, comprising contacting a biological contracting to the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits concreased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for cancer in a patient and for treating a mammal having lung cancer by compound interving a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, cemphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, asthma and bronchictasis. The genes, polynucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences ABUS6408-ABUS6745 represent lung cancer-associated polypeptides of the

whose expression is upregulated or downregulated in specific cancers or cother diseases such as angiogenic or fibrotic disorders, and to methods co fetermining the presence or absence of a pathological call in a cCC patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The cCC invention also relates to expression vectors and host cells comprising a cCC polypeptide of the invention; antibodies which specifically bind a cCC polypeptide of the invention; use of such antibodies for drug targeting; cCC and methods of screening for modulators of activity or expression of the colypeptides and nucleic acids. The mucleic acids for polypeptides, ccc antibodies are useful for disposing, prognosing and treating cc anterosclerosis, inflammatory diseases, autonimume diseases, retinal ccc neovascularistaion syndromes, scarring and uterine fibroids. They may cc also be useful in wound healing and in contraception. The present ccc sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20-FEB-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The invention relates to an agent for the prophylaxis and therapy of CC cancer comprising a compound which inhibits the activity or expression of CC human EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic acids. The invention also relates to a kit for screening for inhibitors CC of EZH2 activity or expression. EZH2 is a component of a complex with that one methyltransferase activity which methylates histone H3 on lysine cresidues at position 9 and/or 27. It has been found to be deregulated in CC various tumours, and acts as a mediator of tumorigenesis, being able to creverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing, treating and diagnosing cancers such as colorectal cancer, breast cancer, lung cancer, pancreatic cancer such as colorectal can also be used in drug screening. The agent of the invention is safe and less toxic than prior art cancer prophylactic/therapeutic agents. The present sequence crepresents human EZH2, which is referred to in the claims.

XX C The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotid or its partial peptide, an antibody binding to the polypeptide or peptid of the polynucleotide, immunologically assaying the polypeptide or peptid of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide expressible manner and an antisense polynucleotide. useful as a primer for synthesising the polymucleotide, or as a probe polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for detecting the polynucleotide. The polynucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, transcription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Local Similarity

                                                                            밁
                                                                                                           S
                                                                                                                                                                                                                                    The invention relates to 242 human STAT6-activating proteins and cDNAs CC encoding them (ADG1041-ADG10894) and to sequences with 95% or more homology to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host cells CC comprising a STAT6-activating protein-encoding nucleic acid; the recombinant production of a STAT6-activating protein; an antibody comprising a STAT6-activating protein; an antibody and the street of the cribozymes targeted to nucleic acids encoding a STAT6-activating protein; an antibody compositions comprising a modulator of STAT6-activating protein; cribozymes targeted to nucleic acids encoding a STAT6-activating protein; cribozymes targeted to nucleic acids encoding a STAT6-activating protein; cribozymes targeted to nucleic acids encoding a STAT6-activating protein; cribozymes targeted to mucleic activations of streating proteins; cribozymes targeted them, and modulators of STAT6-activating proteins, cribozymes targeted to the intendice of allergic cribozymes and treatment of allergic cribozymes and treatment of allergic cribozymes and inflammation, autolumune disease, diabetes, hyperlipidaemia, cribozymes and treatment of allergic chapter inflammation, autolumune disease, diabetes, hyperlipidaemia, cribozymes and treatment of allergic chapter inflammation. The present sequence is related to the invention.
                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from 2774 biomarkers given in the specification (nucleotide sequence SEQ ID NO:1246 (Genbank SET W28729) is especially preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent modulating cdk activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed against the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Biomarkers useful for predicting to a cancer treatment comprising dependent kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

New polypeptides, designated NOVX polypeptides, useful for treating hemophilia, idiopathic thrombocytopenic purpura, autoimmune disease allergies, transplantation, Alzheimer's disease and stroke. disease,

Claim 1; Page 152; 320pp; English.

The invention relates to an isolated NOVX polypeptide selected from NOV1-NOV27 polypeptides, a mature form of NOVX, a variant of NOVX or a fragment of NOVX. Also included are determining the presence or amount of NOVX in a sample (by using an antibody that immunospecifically bind to the polypeptide), determining the presence of or predisposition to disease associated with altered levels of NOVX in a first mammalian subject, identifying a potential therapeutic agent for use in the treatment of pathology related to aberrant expression of physiological interactions of NOVX, screening for a modulator of activity or of latency or predisposition to a pathology associated with NOVX, the nucleic acid

CC encoding NOVX, vectors and host cells. NOVX is useful for identifying an CC agent (a cellular receptor or downstream effector) that binds to NOVX. CC NOVX and NOVX nucleic acids are useful for treating or preventing NOVX-CC associated disorders in humans, and in the manufacture of a medicament CC darenoleukodystrophy, congenital adrenal hyperplasia, haemophilia, CC disease, allergies, immunodeficiencies, transplantation, Von Hippel-CC Lindau (VHL) syndrome, Alzheimer's disease, stroke, tuburous sclerosis, CC Parkinson's disease, huntington's disease, cerebral palsy, epilepsy, CC lesch-Nyhan syndrome, Multiple sclerosis, atxaia-telangiectasia, CC neuroprotection, diabetes, renal artery stenosis, interstitial nephritis, CC neuroprotection, diabetes, renal artery stenosis, interstitial nephritis, CC erythematosus, renal tubular acidosis, immunoglobulin (Ig) A nephropathy, CC hypercalcaemia, cirrhosis, transplantation, athina, emphysema, CC host disease (GVHD), lymphedema, fertility, pancreatitis, obesity, cancerial or parasitic infections. The present sequence represents a NOVX occurred to the present sequence Sequence æ 6; Length

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 14073; 21pp + Sequence Listing; English.

The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme compositions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Claim <u>ب</u> SEQ ID NO 7656; 14pp; English

The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle

```
C tolerance to pathogens or pests, for yield improvement by modification of compositions, for modifying seed oil yield and/or content, for content, for conditication of carbohydrate, nitrogen or phosphorus use and/or uptake c and for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake c and for yield improvement by providing improved plant growth and c development under at least one stress condition. The polynucleotide may c lase encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and c genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen c flow, increasing plant tolerance to cold or heat, improving plant colerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pests or pathogens. They can also be used in physical c arrays of molecules, plant breeding markers, computer-based storage and c analysis systems. The pescent sequence also not for part of the printed specification, but was obtained in celectronic format directly from USPTO at the sequence data for this patent did cont form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention relates to plant genetic engineering. More specifically, the invention relates to isolated and purified polycomb group (PcG) ge from Zea mays (maize), termed Mez1 and Mez2 (Maize $\mathbb{R}(z)$ -like 1 and 2) genes comprising a sequence of 3180 and 3030 bp respectively, defined the specification, or its conservatively modified and polymorphic variants. The PcG genes of the invention are useful in constructing recombinant expression cassettes which can be introduced into a desire

Novel polycomb group nucleic acids and polypeptides from maize useful producing transgenic plants and to repress expression or prevent the expression of a desired target gene in specific tissue in plants in vi

the in vivo.

Promoters derived from the Mezl or Mez2 genes are useful to direct expression of heterologous sequences. The modified variants of the PGG genes are useful for generating or selecting antibodies immunoreactive to the non-variant polypeptide and to follow the segregation of chromosome regions and in marker assisted selection methods for crop improvement. Mezl and Mez2 proteins can be used to repress the expression or prevent the expression of a desired target gene in specific tissue in a plant in vivo, to regulate homeotic gene expression in plants to create novel plants having improved agronomic traits. Protein derived from a PcG gene of the invention is useful as an immunogen for producing monoclonal or polyclonal antibodies which are useful for screening plants for the expression of a Mezl or Mez2 polypeptide, and for affinity chromatography for isolating a Mezl or Mez2 polypeptide. This sequence represents the protein of Mez 2 of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

corganisms such as plants (e.g. maize, rice, sorghum, thale cross, corganisms such as plants (e.g. maize, rice, sorghum, thale cross, conditions, and wheat), cyanobacteria, bacteria, yeast and other fungi. The polymucleotide and polypeptide sequences of the invention are useful in the production of transgenic plants that have improved properties. Also disclosed are methods of producing fertile transgenic plants, preferably maize, with desired phenotypes. The polymucleotide and polypeptide commotic stress, improving plants by providing protection against osmotic stress, improving altering sugar transport and/or metabolism, modifying the cell cycle pathway, reducing plant height, modifying carbohydrate transport, improving crop productivity, improving plant growth and stress resistance, improving disease resistance, improving insect resistance, improving stalk strength, improving water stress tolerance, improving that strength, improving biotic and abiotic stress resistance, improving resistance to oxidative stress, providing control oxidative stress, providing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide, useful for manipulating plant protein quality, improving plant growth, yield and crop productivity or grain compo or producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        stress resistance; disease resistance; insect resistance; heat nitrogen assimilation; water stress tolerance; photosynthetic carbon fixation; virus resistance; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Plant; maize; rice; sorghum; thale cress; soybean; wheat; transgen osmotic stress; sugar transport; cell cycle pathway; plant height; carbohydrate transport; crop productivity; plant growth;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-DEC-2001; 2001US-0337358P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-DEC-2002; 2002US-00310154.

regulator;

New recombinant DNA constructs useful in the field of biochemistry genetics, and in particular for producing transgenic plants with it biological characteristics. and

Claim <u>ب</u> SEQ ID NO 7340; 14pp; English.

The invention relates a recombinant DNA construct comprising a polypucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 5544) and encoding a polypeptide with any of 5544 amino acid sequences (CSEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean, and proteins are plant cold for proteins and proteins are growning a plant toll and proteins and proteins are region and cold cold proteins and protein and proteins are region and cold proteins and plant cell operably joined to a polynucleotide encoding a cold protein and plant cell operably joined to a polynucleotide encoding a cold protein protein plant cells by modification of the cell cycle cold protein protein plant drought tolerance, for providing increased cold plant are plant drought tolerance, for proteins in plant and cold proteins are combination and plant tolerance, for improving plant tolerance to pathogens or pests, for improving plant tolerance to pathogens or pests, for light production, for improving plant tolerance to pathogens or pests, for yield improvement by modification of coldifying seed protein yield and/or content, for yield improvement by modification of coldifying seed protein yield and/or content, for yield improvement by modification of coldifying seed protein production. The polynucleotide may coldifying seed plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and coldification of coldification of coldification are useful in the field of biochemistry and coldification of plant tolerance to entertied and coldification and plant tolerance c drought conditions,

Query Match Best Local S Matches 230 tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20040216190. Sequence Match 17.8%; Local Similarity 25.6%; 405 380 401 344 319 300 267 243 218 201 165 107 688 632 487 572 435 521 461 161 102 230; 76 88 16 RKRVKSEYMRLRQLKRFRRADEVKSMFSSNRQKILERTEILNQEWKQRRIQPVHILTSVS NAVASVPIMYSWSPLQQN-FWVEDETVLHNIPYMGDEVLDQDGTFIEELIKNYDGKVHGD 160 RECGFINDEIFVELVNALGQYNDDDDDDDDDDDDDDEEREEKQKDLEDH----RDDKESRPPRK 217 KKRITAD--RLTYIK--NRIGENKTNISSYTQ----RTYNLS---KNRQISTSKGTDSAS 931 AA; DSSCPCYIAQNFCEKFCQCSSECQNRFPGCRC-KAQCNTKQCPCYLAVRECDPDLCLTC-QSESSSTARVISESSDSEVHPISNKSPQHSPSPSKVKIGPKGGIRKITNRRIAERILMSV SRPSTPTINVL-ESKDTD-------MSDAVLQTLARHM--ERAADDIKARYEILHGEKTKDSCKKGTEHNVKVEDLYCDKDLDA FPSDKIFEAISSMFPDKGTAEELKEKYKELTEQQLPGALPP------ECTPNIDG TSCG----EALI-----CSDSEDEAIEDEEEKKEFKHSEDHIIRMTVQECG----PEVPKLPPYTTWIFLDRNQRMTEDQSVLGR-----SLRGTRE----CSVTSDLDF------PTQVI--PLKTL -GAAD------HWDSKNVSCKNCSIQRGSKKHLLLAPSDVAGWGIFIKDPVQKNEFISEY GKQCPCLSNGTCCEKYCGCPK1CKNRFRGCHCAKSQCRSRQCPCFAADRECDPDVCRNCW IKGTELRTRSRYFRRRGKVRRLKYTWKSAGYNFKRİTERKDQPCR---QYNPCG-CQSTC ---TPPRKKKKKKK-----LWAA---HCRKIQLKKDGSSNHVYNYQPCDHPRQPC I EQGLL VKGLEIFGRNSCLIARNLLGGMKTCKDVFQYMNYIENNSASGALSGVDSLVKGY AEASMFRVLIGTYYDNFCAIAR--LIGTKTCRQVYEFRVKESSIIAPAPAEDVD-----NSSAFAEAHNDSTEEANNRHSATDGYDSSRKEEFVNENLCKQEVYLR-----SWKA 571 KKGQREMASSDSNFVSGYLLARDMKLRSDTRNGNKELIVSSQQSSPSTRSSKKKSTPQIG 520 PCGPQCYQHLEGAKEFAAALTAER----IKTPP-----KRPGGRRR-----GRLPNNS 362 PNAKSVQREQSLHSFHTLFCRRCFKYDCFLH-----PFHATPNTYKRKNTETALDNK 318 VGCGDGTLGVPNQRGDNYECRNMKLLLKQQQRVLLGRSDVSGWGAFLKNSVSKHEYLGEY -----COTPINMKPNIEPPENVEWSG 434 ----SD-----REAGTETGGENNDKE------EBEKKOET----PCGIHCHKL---ASEPDAAAGADHMLFDVEEPTHSSDNVMNQPGSNRKKNGSSGRKTKSQ 400 -----ALDSPDNLPCRRCLVFDCKLHGCSQDLVFP-----TEKQPAWSGVDDSV 343 Conservative 116; Score 677; DB 8; Pred. T41282

probable transcription silencing protein - fission yeast (Schizosaccharomyces pombe)

C;Species: Schizosaccharomyces pombe

C;Species: Change 09-Jul-2004

R;Murphy, L.; Harris, D.; Wood, V.; Rajandream, M.A.; Barrell, B.G.

submitted to the EMBL Data Library, April 1999

A;Reference number: Z21984

A;Accession: T41282

A;Status: preliminary; translated from GB/EMBL/DDBJ

A;Molecule type: DNA
